

Dear Hiring Manager,

I am excited to apply for the Computer Science Intern position at Notarizr. I am currently a Computer Science student at the University of Texas at El Paso. Through my coursework and my current software development internship, I have gained hands-on experience developing web applications, collaborating on production code, and solving real-world technical challenges. The opportunity to contribute to an innovative legal-tech startup while continuing to grow as a developer is especially exciting to me.

In my current internship with Sandstone Real Estate Group, I have worked on maintaining and improving production websites using modern web technologies. I regularly use Git and GitHub for version control, collaborate through feature branches and pull requests, and make updates to React and [Next.js](#) applications. I've also worked with GoHighLevel to build CRM automations, connect forms through webhooks, integrate APIs, and improve workflows that reduce manual work and create a better experience for users.

Throughout my internship experience, I have developed a strong understanding of maintaining web applications, troubleshooting issues, and writing clean, maintainable code while working in a collaborative development environment. The projects I've helped on have strengthened my problem-solving skills and taught me how frontend and backend systems work together to create reliable user experiences.

As a computer Science student who is also interested in cybersecurity, I am interested in building secure, reliable software that provides an excellent user experience. The opportunity to work in a fast growing startup environment, collaborate across teams, and continue expanding my technical skills is exactly what I am looking for.

Thank you for considering my application. I would welcome the opportunity to discuss how my technical background, internship experience, and interest for software development make me a strong candidate for this role. I look forward to hearing from you!

Sincerely,
Alexandra Miranda
